

## Reporting on Philadelphia's School Health Services in 200 Words

[Population Health Sciences](#)

### Date Posted:

Mar 02, 2020

The health of students is critically important to their educational engagement and attainment and can help put them on a path to a successful future. Individuals with more education are likely to [live longer, experience better health outcomes, and practice behaviors that promote health](#), such as obtaining yearly check-ups.

To realize these benefits, students need to be healthy and attend school. Unfortunately, [more than 7 million students were chronically absent](#) in 2015-16. *That's 16% of the student population.* Although these absences are not solely connected to health care needs, [providing both physical and mental health services within schools](#) improves attendance, reduces the likelihood of dropouts and supports academic achievement. For these reasons, many of the nation's school districts recognize the need to foster education *and* health within schools, where children can most readily access care.

Philadelphia is one such district, and in 2019, School District of Philadelphia (SDP) leadership approached PolicyLab to commission an evaluation of their school health services to identify areas of success and opportunities for improvement. Throughout our review, it was clear that the district has a strong foundation for school health services and a talented workforce of school health nurses and administrators. You can read more about SDP's current operations—as well as our recommendations for the advancement of data, technology and the capacity for quality improvement—[here](#).

It was a pleasure partnering with SDP in this work, and we are confident that the opportunities we outlined will enhance their ability to support the well-being, growth and educational success of every student.
