HEALTH AFFAIRS ARTICLE: Growth of Public Coverage
Among Working Families in the Private Sector

policylab.chop.edu |  [@PolicyLabCHOP](https://twitter.com/PolicyLabCHOP)

ABOUT THE STUDY

In its July 2019 issue, Health Affairs published a study written by PolicyLab researchers that reinforces the value of public health insurance programs to working families across the U.S.

ABOUT THIS TOOLKIT

This toolkit provides the following materials to assist you in disseminating the findings of this research to your networks:

- Key messages (slides 4-6)
- Suggested tweets sharing the Health Affairs article (slide 7)
- Suggested tweets sharing a PolicyLab blog post on the research (slide 8)
- Downloadable PolicyLab images to share in social media posts (slide 9)
- Suggested tweets to share a video on recent trends in children's health insurance, including findings from this study (slide 10)
- A blurb about the research that you can include in your next newsletter (slide 11)

KEY MESSAGES

Researchers found that between 2008-2016, more and more parents working in the private sector insured their children through public insurance programs.

- This occurred as they faced increasing health insurance costs and/or inadequate coverage through their employer.

KEY MESSAGES

While the greatest increase in Medicaid and CHIP enrollment was among children in low- and moderate-income families working at small businesses, the more surprising finding was the migration among families working at large companies.

- Of the 8.6 million children in working families who are covered by public insurance, more than 70% had a parent employed at a large, private firm.

KEY MESSAGES

As health insurance costs rise, we must acknowledge the role that public insurance programs play in the lives of working families.

- Effective policy solutions that seek to maintain high insurance rates among our nation's children will not limit access to Medicaid and CHIP for working families, as our evidence suggests their enrollment in these programs will only increase in the coming years.

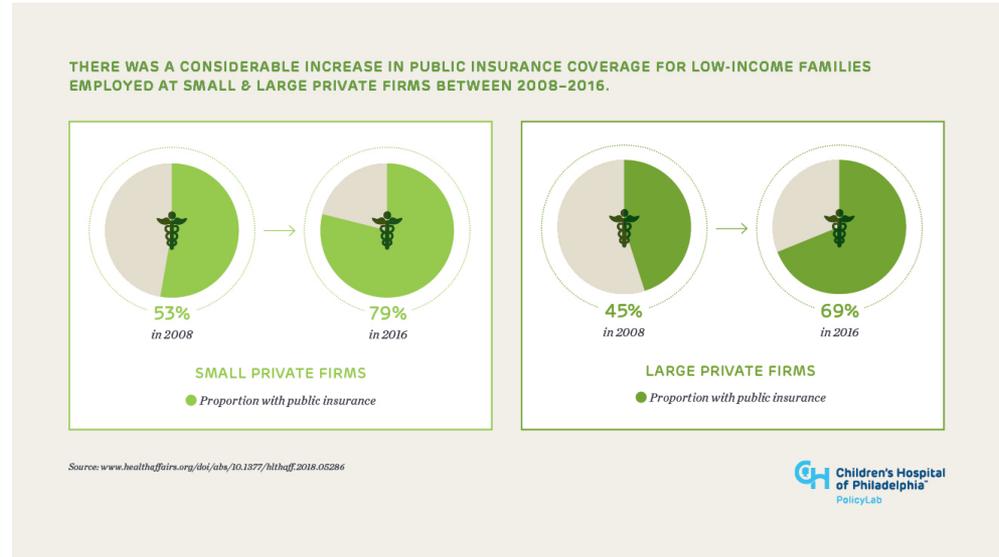

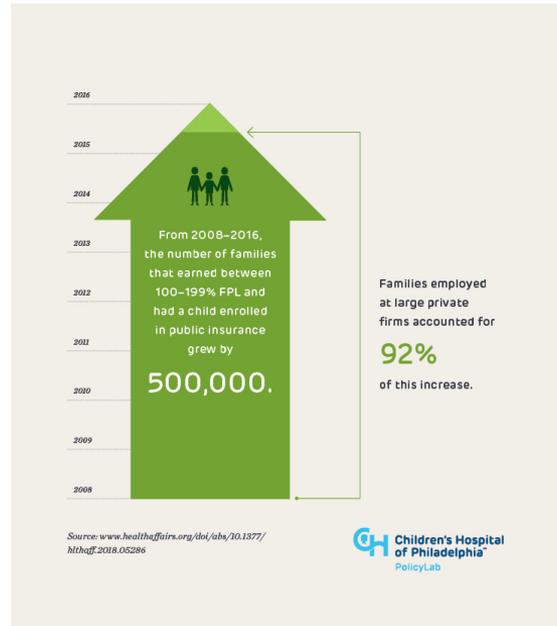

TWEETS FOR HEALTH AFFAIRS ARTICLE

- NEW research from @PolicyLabCHOP shows that more & more families in the private sector are turning to public insurance to cover their children. Read the @Health_Affairs article here:

New Study: More Parents Working for Large Employers Turning to Medicaid & CHIP

A new *Health Affairs* [study](#) from researchers at [PolicyLab](#) at Children's Hospital of Philadelphia shows more working families are relying on Medicaid and CHIP than ever before to insure their children. In addition to increases in public insurance coverage among kids with parents working at small businesses, they found the largest number of children in low- and moderate-income working families with public coverage had parents employed at large, private firms. The authors suggest that as health care costs continue to rise, more families are being priced out of workplace insurance and are turning to Medicaid & CHIP for support. Learn more:
